

Composting Facility Herešin

Made by: Izabela Hana Krapinec, Dorotea Skvaža, Filip Sršek
(6th and 7th grade students)

June, 2022

When we arrived at the composting facility, we were welcomed by our guide Petra Kolarić Kapusta. While we were walking around, we asked her some questions...

- Q: When was the composting facility established?
- A: It was established in 2011.
- Q: Why was it established?
- A: Composting facility was established with a goal of separating mixed waste.
- Q: Where do you get composting materials?
- A: Materials we use are brought to us by our users.

Why is it so important to compost?

- It is important to compost because composting from organic waste creates valuable organic substances that improve soil structure, help retain moisture, make the soil more airy, increase soil microbiological activity, enrich it with nutrients and increase plant resistance to pests and diseases.

What can we compost?

COMPOSTABLE

UNCOMPOSTABLE

We have also seen:

Truck washer

Truck scale

Normal landfill

Composter

Thank you for your attention!
